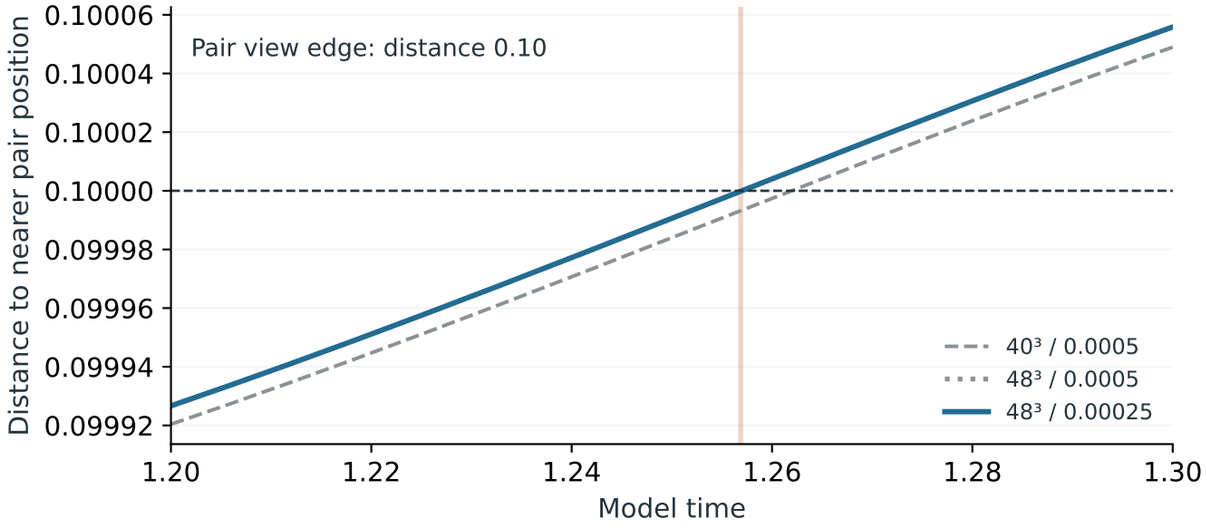
Follow 540 out and 872 in

After-write tick 41 (time 1.2) → time 1.3 · historical breathing-on simulation

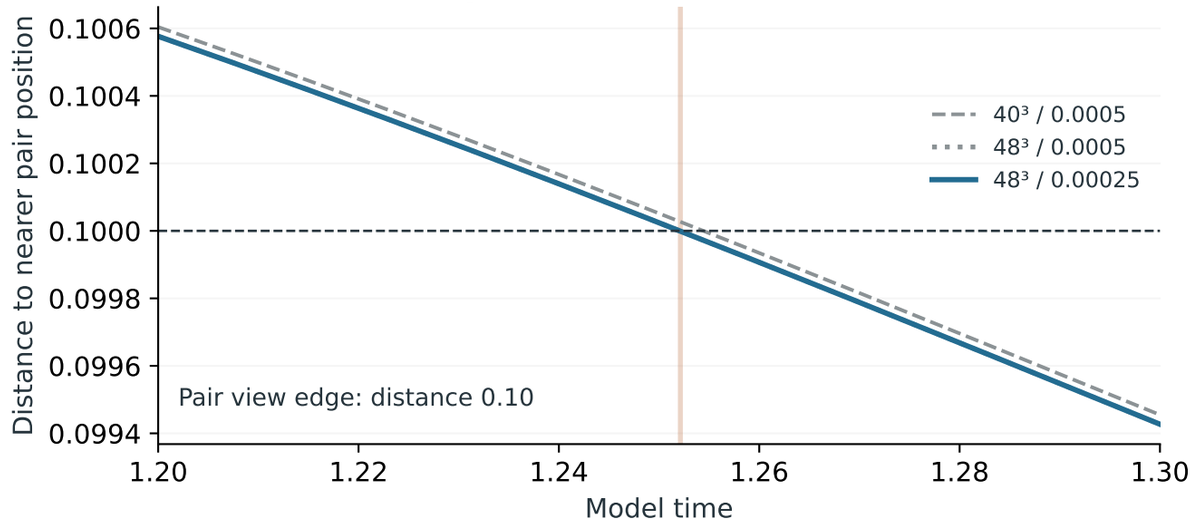
The labels persist. What is nearby changes. An observation boundary is not a physical break.

540: leaves the pair’s view



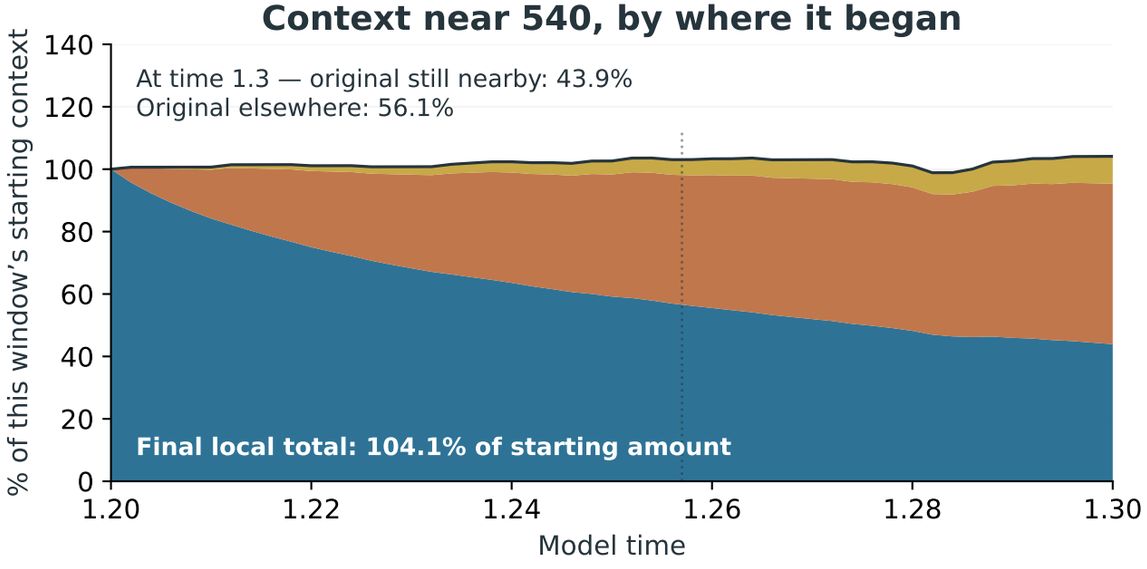
Crossing bracket: (1.25675, 1.25700]

872: enters the pair’s view

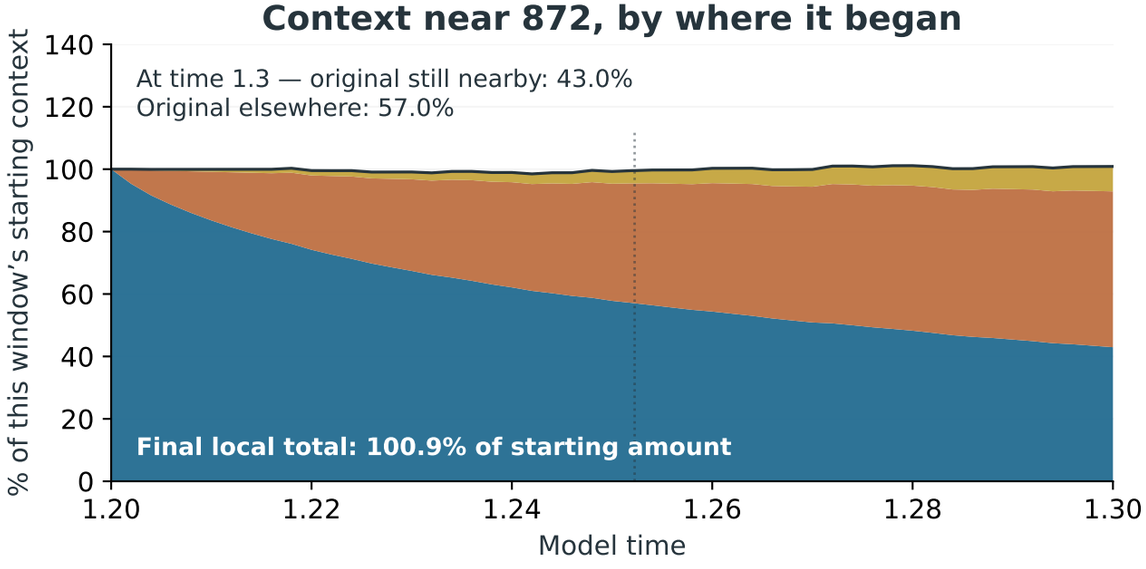


Crossing bracket: (1.25200, 1.25225]

Context near 540, by where it began



Context near 872, by where it began



Originally near this label · Other initial origins · Later source input

Local windows: radius 0.075, moving with each label; they overlap. These are views, not owned parcels.

C is model context, not water mass. The chart uses 48³ / step 0.00025; origin shares still vary with the grid.

Lean: 134 passing finite checks of rules and records. Fluid evolution and complete retention are not proved.
